Description of the abbreviations in the value table:

Item no.	Item number
V	Nominal volume of the crystallizing dishes
H	Max. height of the crystallizing dishes
Ø	Max. upper diameter of the crystallizing dishes
S	Max. wall thickness of the crystallizing dishes

In spite of the low coefficient of thermal expansion of borosilicate glass 3.3, temperature shocks have to be avoided in any case. Temperature shocks can lead to a breakage of the glass and cause therefore a higher risk of bad injuries.
