

## LABSOLUTE® VOLUMETRIC FLASKS

clear glass, with hollow glass stoppers

The LABSOLUTE® volumetric flasks with accuracy class A are made from high-quality borosilicate glass 3.3 and have a standard ground joint. They are supplied with hollow glass stoppers. The LABSOLUTE® volumetric flasks comply with DIN EN ISO 1042 and are calibrated to 'In' (20 °C). They are available in sizes from 5 to 2,000 ml. A batch-specific certificate of conformity can be supplied on request by quoting the AN number on the label and the retrace code on the flask.

Th. Geyer GmbH & Co. KG

**Application notes:**

Cleaning with alkaline detergents at temperatures of less than 70 °C. Rinsing time should be kept to a minimum when using alkaline cleaning agents. There can be an abrasion of the glass surface already at 50 °C when the flasks are treated with alkaline detergents for a longer time. This abrasion leads to a change of the nominal volume.

- **Recommendation:** Cleaning at more than 90 °C without any cleaning agents (hot water cleaning).

Volumetric flasks with hollow glass stoppers are suitable for customer who have problems with the chemical resistance of the PE stoppers.
